Arbitrary real six-square covering\nActual roles and midpoint classification
G5 exclusion\nUnique centre tile and its interior
G1, centre-G2, G4 and G3 exclusions\nUniversal centre-no-mid statement
Near-end G2\nExclusion
Inscribed-square argument\nAxial root caps
Far-end G2: gaps and horizontal states\nFinal form with the same C and F
Actual seams and four joining modes\nUpper bridge / right bridge / double direct
Angle and parameter-domain exclusions\nProposed contradiction
